

I dont know where we left last time

Hydrological features of slovenian rivers

- About 350hm³ (2% of slovenia territory) is intended for water supply, irrigation and industrial purposes.
- Total capacity of all slovenian reservoir is 280hm³

Geography features of slovenia

- Precipitation, in the cross of different winds. From the Alp and the Mediterranean Sea (orographic precipitation in the west, convection precipitation in the east).
- Lju is veru affected by the climate changes, especially in summer times.

River flow regime

- quite good in flow capacity in slovenia
- Drava and Mura rivers are following a snow regime (low in winter time, hight in late spring and beggining of summer because of the melting snow)
-
